

## Vantage 7100 and personal ftp server

With FTP SERVER is possible to connect the Vantage 7100, through the lan connection, to our PC. The configuration is simple:

1) First you must set the Vantage 7100 in the Multimedia Menu >Ethernet> TCP Explorer.

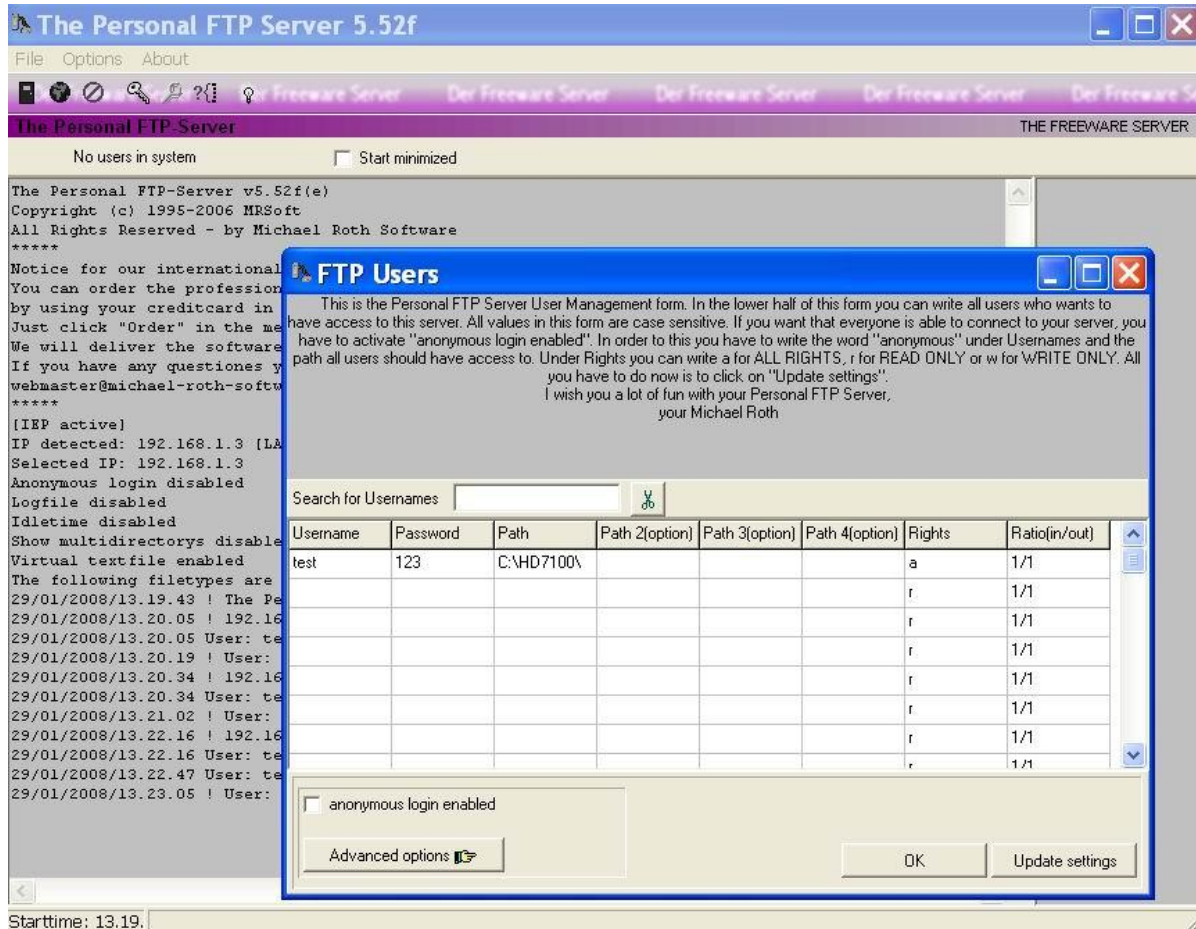

Select the option **Website User Site**; in the field **ADDRESS** we write our computer's IP address (ex. 192.168.1.3), in the field **Username** we write a user name as we like(I used **test**), to the field **Anonymous** we insert option **off**, and at last in the field **Password** we insert a password as we like(I used **123**). In order to enter in **modifie mode**, i remind you to use the remote control button red.

- 2) Let go to start **Personal Ftp Server**, we select the menu **Option > Users**; in the field **username** we will write the same username used in the Vantage 7100 (test), in the field **password** the same password used in the Vantage(123), in the field **Path** we will insert the directory of the folder in our pc, we want share with the STB. I've create in the C disk a folder called HD7100 where i'll put the files to be shared with the Vantage 7100....so in the field **Path** we will write C:\HD7100.

Last field to set is **Rights** where we will write A (A for all). Save all with the key UPDATE SETTING and ok .

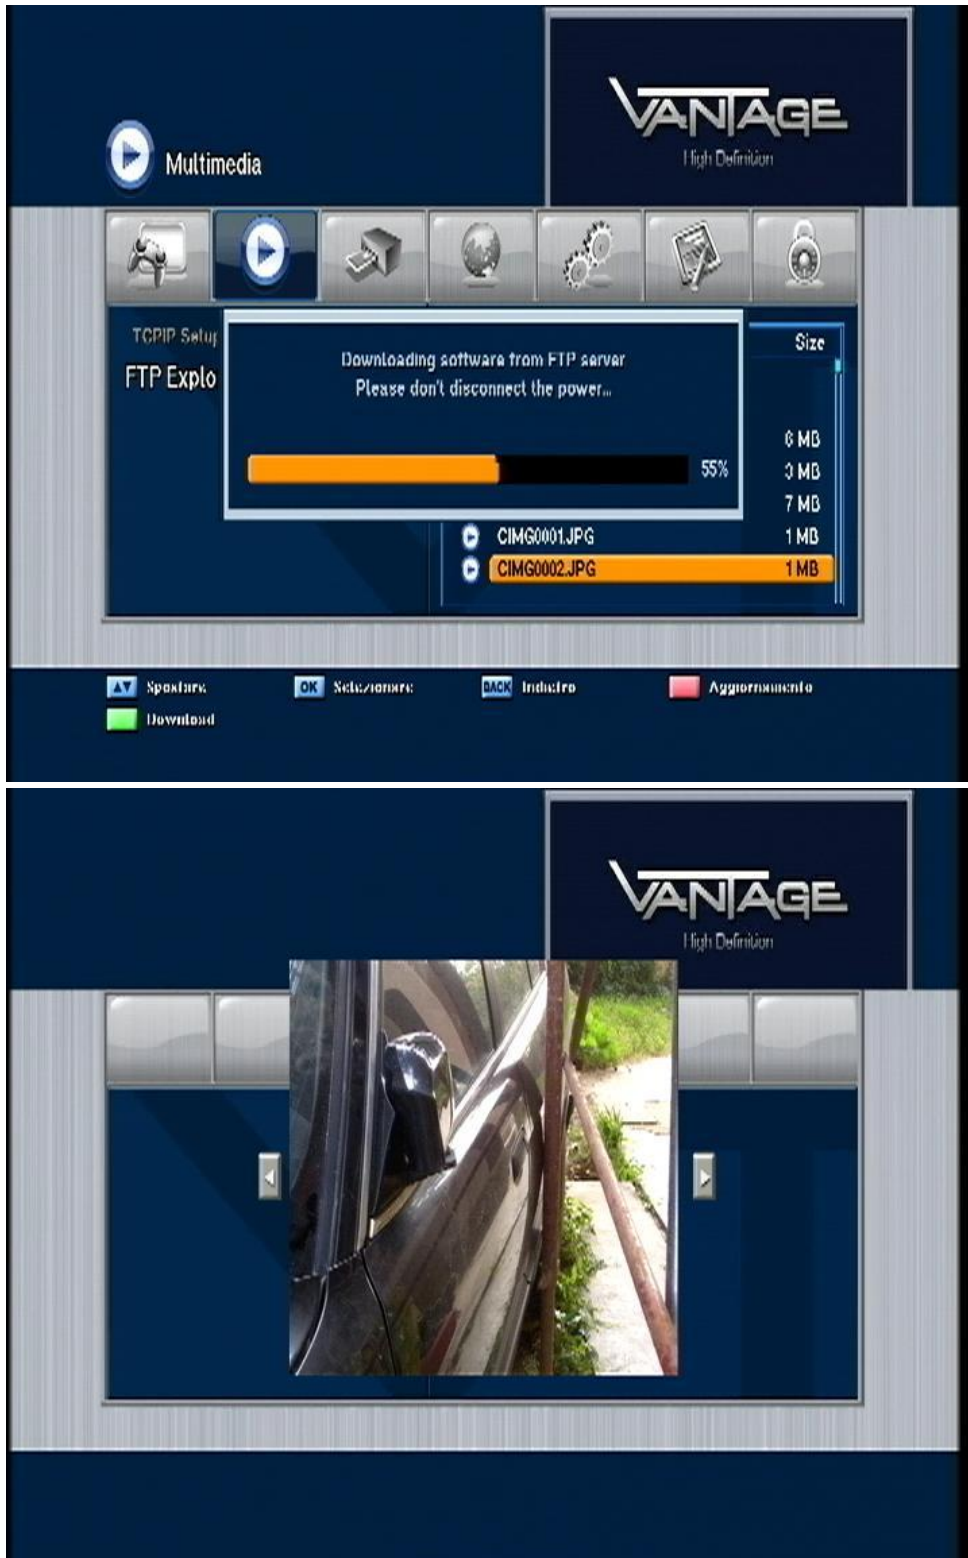

3) We connect now the 7100 to the router with a lan cable , and we select in the menu FTP EXPLORER user site, then ok in the remote control;

fter a while the stb osd will show us the contents of the shared folder on our hard disk C, so at this point we will be able to select the files to download in our 7100 ; we can select the file we like with the remote control unit, and start the download using the green button of remote control.

4) It is very important to disable all the firewall or antivirus working in your pc.
